**"HIBUN Data Encryption" encrypts data on hard drive, removable media, and file server to protect your confidential information.**

## Feature

Select the encryption type

Stand-alone implementation

Enforcement of data encryption

# HIBUN Data Encryption

HIBUN

## Select the encryption type depending on the purpose

Provide proper encryption type based on usage scenes to secure business data without compromising usability.

### Internal use

#### Data on PC

The data files are encrypted by each drives. Transparently the data are encrypted & decrypted.

#### Data on Media

Encrypted data on media for internal use are only viewable at the office.

### External use

#### File encryption for media and email attachment

Data for external use is encrypted as Decryptable HIBUN Confidential files. It requires password for decryption.

\*Confidential file viewer is required to decrypt Decryptable HIBUN Confidential files and the viewer can be downloaded from the HIBUN official site

## Stand-alone implementation

Enable to be implemented even on one PC without management server. You can take a security measure at once.

## Enforce encryption on copying data to removable media

Only Decryptable HIBUN Confidential files is permitted to be copied to removable media or CD/DVD depending on the setting. Prohibition of copy plain-text file prevents user from providing plain-text file to outside office unintentionally and reduces risk of information leakage.

## HIBUN "Three forces" resolves complex security issues.

Security risks in the IT environment are sophisticated and diversified with current compound uncertain and boundary blurring situation. HIBUN three forces "Regulate", "Encrypt" and "Trace" surely resolves complex security issues.

Regulate

Encrypt

Trace
