FOR IMMEDIATE RELEASE

TitanFile Announces Extended Partnership with Hitachi Solutions America to Bring First-of-its-Kind Advanced Credeon Browser Technology into Secure Correspondence and File Sharing Platform

Company to showcase new integration that leverages the latest technological advances in browser technology, requiring no download or install by the user, at ABA TECHSHOW 2015

WATERLOO, Ontario – April 8, 2015 – TitanFile Inc., a private correspondence and file sharing platform for legal professionals and other businesses, today announced that the company will be showcasing its new integration with Credeon Cloud Data Protection browser technology, a product of Hitachi Solutions America, Ltd., at ABA TECHSHOW 2015 at booth #714, making it the first, and only, offering of its kind to the legal market.

Credeon prevents unauthorized parties from accessing confidential data. Credeon's solid security features, such as client-side encryption and remote encryption key management, enable users to encrypt and store data on their own terms.

The latest integration between TitanFile and Credeon leverages the newest technological advances in browser technology. It brings the features and capabilities of Credeon to the TitanFile application within the browser, without requiring the user to download and install any software or plugins. The new implementation is an industry first and based on the HTML5 Web Cryptography API standard currently being developed by the World Wide Web Consortium (W3C).

"We are thrilled TitanFile will be the first commercial secure correspondence and file sharing platform to leverage the Credeon browser technology," states Yuji Nakagawa, vice president, Security Solutions Department of Hitachi Solutions America. "All the mainstream browsers such as IE, Chrome, Firefox and Safari have recently started rolling out support for this technology, and through this partnership, TitanFile is able to offer its clients the most secure location to conduct business. The best part is that there is no action required on the user's part. No download or installation is needed – it is already embedded into TitanFile for them."

"TitanFile has become a leading cloud file sharing and communication platform for legal professionals because it is easy to use and brings an extremely high level of security to everyday communications," states Tony Abou-Assaleh, president and COO of TitanFile. "Our solution's integration with Credeon prevents unauthorized parties from accessing confidential data with solid security features such as client-side encryption (a different key for each channel) and remote encryption key management. We are excited about this latest technological offering and what it means for our clients."

TitanFile provides control and auditability of all messages while managing documents and communications around client, matter or project – all neatly organized into channels. TitanFile partners with Hitachi Solutions America to deliver its cloud file sharing solution to the legal market.

To set up a demo of TitanFile at ABA TECHSHOW 2015, taking place April 16-18 at the Hilton Chicago, visit the company's booth (#714) or contact sales@titanfile.com.

About Credeon Cloud Data Protection – Hitachi Solutions America, Ltd.
Credeon Cloud Data Protection is a product of Hitachi Solutions America, Ltd.
